

LIGHTNING TALK 2

COLORECTAL CANCER

Know it. Fight it. Prevent it.

PROBLEM STATEMENT

”

Colorectal cancer remains a significant public health challenge worldwide. As an analyst, I was hired by the Ministry of Health to help raise awareness about colorectal cancer in Bahrain. The main challenge lies in extracting actionable insights from available data to improve early detection, patient care, and cost efficiency.

“

GOALS

1. Understand colorectal cancer patterns.
2. Identify key risk factors.
3. Support data driven prevention strategies.

AIMS

1. Analyze incidence and mortality data.
2. Investigate relationships between risk factors and cancer stage.
3. Provide recommendations to awareness and early detection.

APPROACHES

- 1-What are the common demographic and lifestyle risk factors associated with colorectal cancer?
- 2-How do incidence and mortality rates vary across countries and age?
- 3-What is the relationship between cancer stage and survival chances?
- 4-How do different treatment type affect patient outcomes?
- 5- How do patient survival rate vary across regions depending on healthcare quality and accessibility?

TOOLS

Python
To Clean and
Analyze

Power BI
To Visualization

AUDIENCE

General Public and Community members

To raise awareness about colorectal cancer, prevention, and early detection.

Healthcare Professionals and Students

To share insight from data trends and risk factors.

Public Health Organizations

To support evidence-based decisions on prevention programs and campaigns.

At Risk Groups

Such as people with family history of colorectal cancer to encourage screening and lifestyle changes.

LIMITATIONS

- **The dataset lacks Middle Eastern data, limiting insights for that regions.**
 1. Cultural barriers and low awareness hinder early detection.
 2. Lack of national screening programs in most countries.
 3. Financial constraints limit access to effective screening methods like colonoscopy.
 4. Human displacement strains cancer control efforts in the region.
- **The dataset does not include a time period, which makes it unclear when the data was collected.**

The background is a light blue gradient. In the top left and top right corners, there are several stylized virus particles with brown outer shells and pinkish-red centers. In the bottom left corner, there is a faint, light blue outline of a hand with fingers spread. In the bottom right corner, there is a dark blue and purple line-art illustration of a hand holding a small rectangular object, possibly a card or a piece of paper.
